The changing infrastructure of tertiary education

Conclusions
The changing environment

- Higher and tertiary education is changing
  - rapidly
  - becoming more diverse
  - becoming more business-like

- We live in a knowledge-based society
  - interdisciplinary-learning
  - public sector has lost its monopoly
Some things we know...

- growth in numbers
- greater student choice
- more adult students (lifelong learning)
- raised expectations of relevance and outcomes
- growing pressure for efficiency and accountability in management
Some things we think we know...

- what facilities we have
- how to manage them reasonably efficiently
- how much ought to be spent to get them into good shape
- what education used to be like
And some things we don’t know

- impact of competition from the private for-profit sector
- how information technologies will develop and influence the sector
- what difference our work on facilities design and management actually makes
How we are responding...

- flexibility of design
- flexibility of procurement (more leasing)
- flexibility of management (more planning of space use)
- new management tools
- more professionalism in our work
Where we need to do more...

- basic research into the impact that facilities have on learning
- exchange of information between ourselves - nationally and internationally
- pursuit of influence and responsibility in strategic management
And finally...

- strive to bring together facilities management, educational policy, and the practice of teaching and learning
- in the final analysis our business is about educational excellence, but it is also about institutional survival
